

1. An electrical connector for connection to a mating connector comprising a substrate supporting a contact for making electrical connection with a corresponding contact on the mating part, wherein the contact of the electrical connector is a resiliently deformable hollow projection.

5

2. A connector as claimed in claim 1 wherein an exterior surface of the contact is generally convex.

3. A connector as claimed in claim 1 wherein the contact is generally dome-shaped.

10

4. A connector as claimed in claim 1 wherein the contact comprises a metal.

5. A connector as claimed in claim 1 wherein the contact comprises an insulating material treated so as to be conductive.

15

6. A connector as claimed in claim 1 wherein the substrate comprises a Printed Circuit Board (PCB).

20

7. A connector as claimed in claim 6 wherein the PCB is flexible.

8. A connector as claimed in claim 1 wherein the substrate supports a conductive track electrically coupled to the contact.

25

9. A connector as claimed in claim 1 including means for retaining the mating part in contact with the connector.

10. A connector as claimed in claim 1 wherein the contact is secured in position on the substrate using solder.
